To the Trade

FOR some years we published our REPAIR CATALOG & REFERENCE BOOK and our MERCHANDISE CATALOG separately because in many concerns the two lines are handled by different people. We found however, that it is sometimes confusing to the trade to have two catalogs and that a COMPLETE CATALOG is perhaps more convenient. The last two years we combined both books and the COMPLETE CATALOG has proven very satisfactory, the REPAIR CATALOG & REFERENCE BOOK is in the front part and the MERCHANDISE CATALOG is in the rear of this COMPLETE CATALOG.

REPAIR SECTION

We give the name of the Range, Stove, Furnace or Boiler, the name of the Manufacturer, all the sizes that have been made, the different styles of grates that have been used, give other information and ask necessary questions which should be answered so that your order can be filled correctly without delay.

Our object is to assist the dealer and to make his repair business as little work and as much profit as possible. The dealer can assist himself and us if he will make the proper use of this book and avoid delays, errors, expense and unnecessary correspondence.

All our repairs are purchased by us from the manufacturers or made from patterns owned by us. We can furnish repairs for many stoves and heaters which the manufacturers cannot furnish and in many cases where the manufacturers have been out of business for many years.

We have purchased the patterns of Chilson Furnace Co., Richmond Stove Co., Smith & Anthony Co. and Spicer & Peckham.

WE TAG ALL REPAIRS telling the name and number of the range or heater the parts will fit.

All repairs are shipped the day order is received if the goods are in stock in Boston. Repairs not in Boston will be ordered from the manufacturers if you so desire.

See directions for ordering repairs on page 2.

MERCHANDISE SECTION

We illustrate and give list prices of Stoves, Ranges, Furnaces, Boilers, Gas Ranges, Gas Water Heaters, Stove Pipe & Elbows, Furnace Pipe and Fittings, Fireplace Fixtures, Registers, Sinks, Stove Supplies of all kinds.

See index in rear of book.

DIRECTIONS FOR ORDERING REPAIRS

Give complete description, stating whether range, cook stove, parlor, oak, open grate, furnace, steam heater or hot water heater.

Give complete name, correct number, style of grate, maker's name and latest date.

In ordering always look in repair catalog and see what other information is required.

NAME. Give complete name, for example, if **WAVERLY**, whether **WAVERLY "A", WAVERLY IMPERIAL, WAVERLY JEWEL, PRIZE WAVERLY**, etc.

NUMBER. Give correct number of range, for example, 7–16, 7–18, 8–18, 8–20, 9–20, 9–22, 77, 8–10, 70–18, 518–12, 63–80, 7–18–4, 828–03, 1B, WB282, 82 HF., etc. (The size is usually found on the top of the range to the left of the pipe collar.) Do not specify simply the size of holes. If you order No. 7, we shall understand that range has 7 inch covers and 18 inch oven, No. 8, 8 inch covers and 20 inch oven.

STYLE OF GRATE. Always tell the style of grate. See illustrations on page 7. We sometimes ship plain if style is not given. Never say that a range has a Double Grate, because Dockash, Triangular and Duplex Grates are all Double Grates. Refer to catalog and see what styles of grates the range takes and order accordingly. It is frequently necessary to know the style of grate in filling an order for linings.

MAKER'S NAME. Always give the name of the maker. There are often stoves of the same name made by different foundries and it is impossible to tell which you want the repairs for unless you give the name of the maker, which is usually found on the right end of the range and not on the shelf under the oven door.

LATEST DATE. Always give the latest date. When a date is given we will understand it to be the latest date. (On a range the date is usually found on the shank plate or right end guard.)

COAL FIXTURES. We understand this to mean the entire fire box including shaker.

FIRE BOX. We understand this to mean all parts inside the fire box. Shank plate, end guards and shaker not included.

LININGS COMPLETE. We understand this to mean the brick linings together with the iron ends and front grate if range takes any, but not the front guard if range has a front brick lining.

LININGS. We understand an order for linings to mean the **bricks only, no iron ends or front grate.** If range has a waterfront, brass coil or combination waterfront, be sure to state which (if coil give description of same), otherwise, we will understand that it has neither. We furnish brick to fit the coils made by the manufacturers. If there is a "home-made" coil in the range and the brick does not fit, it is not our fault.

FRONT GRATE. Solid Cast Iron Lining which takes the place of a front brick.

FRONT GUARD. A casting which goes between the front brick and the fire end jamb of the range.

IRON ENDS. State whether right or left end is wanted. Not shipped on an order for "linings." If range has waterfront or coil, be sure to so state because the iron ends may be different. If you do not state, we will understand that the plain ends are wanted.

END GUARDS. These are the thin cast iron plates which go behind the end linings. State whether right or left is wanted.

WOOD FIXTURES AND WOOD LININGS. We understand this to mean the entire set of fixtures for burning wood, but not the extension box. Always specify when wood fixtures are wanted, otherwise, we will understand that coal fixtures are wanted.

GRATE BARS. In ordering a dockash or triangular bar, instead of ordering a back or front bar, order a long or short bar as the case may be. On some ranges the long bar is the front bar and on others it is the back bar, so there will be less chance of error if you specify long or short bar.

GRATE BEDS OR FRAMES. If you order a Dockash, Triangular or Duplex Grate, and the bars are mounted into the frame, we will send bars and frame complete (except on the Magee Ranges which take a heavy bed, the bed is never sent unless especially ordered.) If you want the bars only, order One Set of Bars.

DRAW CENTER GRATE OR DRAW CENTER GRATE COMPLETE. We understand this to mean the Grate and Draw Center. If you want the grate only, order a Grate less draw center. *Grate Bed or Brick Rest* are never sent unless ordered.

LINING CLAMPS OR GAS BURNERS. State whether the front or back is wanted.

WATERFRONTS. On ranges that have more than one style of waterfront, we will always send the straight waterfront unless the elbow or double elbow is ordered.

BRASS COILS. Always tell the style of coil in range. See illustrations on page 8. Sometimes a pumber will put a coil of his own make into a range which is different from the style furnished by the manufacturer. In this case, the brick may not fit. If you order brick to fit a front coil and the manufacturers never made such a coil for the range, we will send plain back and end bricks which will have to be fitted to the coil.

COMBINATION WATERFRONT. This is a cast iron waterfront with a brass pipe extension around the right end and back of fire box. See illustration on page 8.

COIL WATERFRONT. Never order a coil waterfront or brick to fit it. We will not know whether a brass coil or a combination waterfront is wanted.

CHANGING STYLE OF GRATE. When changing from one style of grate to another, be sure to so state, so that we may send you the parts necessary to make the change, should you omit to order them. Be sure that the range takes the style of grate that you wish to change to. You can find this out by referring to the catalog.

CHANGING FROM WOOD TO COAL OR FROM COAL TO WOOD. If you are making one of these changes, be sure to so state, so that we can send you any parts necessary to make the change, that you omit to order.

RESERVOIR REPAIRS. In ordering parts for reservoir, give the correct name of parts wanted. See illustration on page 5. If you are changing from a plain to a reservoir range, be sure to so state, so that any necessary dampers or flues may be sent.

MAIN TOPS AND TOP END SHELVES. State whether plain edge, polished edge, or nickel. If nickel, whether the rails are bolted or removable.

OVEN SHELVES. Do not order an oven shelf. Order an oven rack or a shelf under the oven door as the case may be.

MANTEL SHELVES. Sometimes the mantel shelf on a range is not the one which was made for the range, possibly it was made for a range made by a different manufacturer. When we send repairs for mantel shelves we send repairs for the shelf which was made for the range. If any other shelf is on the range it is, of course, no fault of ours.

NICKEL PARTS. Nickel parts are never sent unless ordered. If you want a shelf and also the nickel, order "Shelf and Nickel."

LEGS. State whether range has a Base, Hot Closet or neither, also, whether front or back legs are wanted

FURNACE AND BOILER GRATES. State which bar is wanted, counting from left to right as you face the heater, except on furnaces made by Richardson and Boynton Co., bars of which are numbered differently, see illustrations on page 56. Always give casting marks if possible. In some heaters left and right hand bars are the same, allowance being made in the grate frame or ash pit or by reversing the cogs. In some heaters, including the Magee, Howard, Richmond, etc., it is possible to put the left hand bars on the right hand side and vice versa, so it is always best to give all marks on bars. See illustrations on page 56.

FOUNDRY ORDERS

When goods cannot be obtained in Boston, we will order them from the foundry unless you instruct us otherwise.

We use the same words that you use in ordering from us. If the foundry does not understand the description and sends the wrong parts, we, of course, are not to blame, but we will do everything possible to straighten the matter out.

We send you a postal card which is a copy of our order to the foundry. Examine this postal carefully and advise us at once if goods are not ordered correctly, giving us our order number, which appears on the card.

CANCELLATION OF ORDERS

When the goods are ordered from the foundry, we cannot cancel the order, unless the foundry will cancel our order.

Goods which have been ordered from the foundry positively cannot be returned unless the foundry will allow us to return them.

DEFECTIVE GOODS

GRATES. If a grate has a sand-hole or other defect in manufacture, we will send you another free of charge. If the grate is burned out or melted, we will charge it to you, because it cannot be burned out except by allowing the ashes to accumulate in the ash pit, which of course, is no fault of ours. *See below.*

BRICK LININGS. The life of brick linings is very uncertain. The very best clay obtainable is used in our linings, but because of the nature of the goods we cannot guarantee them.

WATERFRONTS. If a waterfront leaks when the water is turned on, we will send you another. If a waterfront gives rusty water, we will send you another, but that ends our responsibility. There is no guarantee against a waterfront giving rusty water and there is no way of telling whether a waterfront will become "rusty" or not.

When we send a waterfront to replace another, the old waterfront must be returned to us for examination before credit is given.

We will pay no bills for labor or other expense in replacing defective goods.

BURNING OUT OF GRATES

Reprinted from Metal Worker, Plumber and Steam Fitter, issue of January 8, 1915.

"Manufacturers are always willing to replace defective parts, but when portions of an equipment are so greatly abused that their life is shortened or that irreparable injury is caused purely through carelessness or ignorance on the part of the ultimate consumer, the problem becomes a very serious one, both for dealer and manufacturer. Particularly is this true where the customer, though mistaken, may honestly believe that the destruction of the parts is due to poor material or workmanship.

It is a physical impossibility to melt cast iron except by imbedding the iron in the fire or ashes, which is the result of allowing the ashes to accumulate in the ash pit and shutting off the draft to the grate. To melt cast iron in a cupola, it is necessary to mix the coke and iron together, and this, in addition, must be helped out by a blast. The only way to melt a grate is by allowing the ashes to accumulate in the ash pit until they touch the grate. The fire on top of the grate will heat the ashes below and in this way melt the grate. If the ashes were not up to the grate, air would be allowed to pass through the bars and in this way would not allow them to melt. This is the only possible way in which a grate could be melted. Under these conditions there is no foundry which will guarantee the grates except against imperfections. They cannot be guaranteed against burning out, because, as we have said before, there is only one way to burn them out and that is through carelessness.

The average householder is not conversant with the fact that iron can be melted in the manner indicated, and when he neglects to clean out the ashes from below the grate so that they come in contact with the latter, he is usually very much surprised at the destruction which results."

MISTAKES

Advise us at once if repairs do not fit, giving us the marks which appear on the repairs sent you, also the marks on the old parts, if possible.

The same repairs frequently fit different stoves, so do not condemn the repairs because they are not marked with the same name as stove for which they are wanted. Try them in the stove.

If our mistake, we will prepay the transportation charges and we will, also, pay the return charges on the incorrect repairs.

We will not pay any bills for labor caused by the error.

RETURN GOODS

The returning of goods for credit is the most unsatisfactory part of our business. This is due to many causes, some of which are as follows:

Goods returned without any tag or other marks to show who returned them.

Goods returned in damaged and unsalable condition.

Goods returned which were ordered by us from the foundry and which cannot be returned to the foundry.

Goods returned which were made to order.

In order that you may get proper credit for return goods, we would ask that you observe the following:

Write us telling what goods you want to return, giving us the date of invoice on which they were charged to you and your reason for returning them.

We will send you a tag and shipping instructions. Do not return any goods without instructions because the goods you wish to return may not be of any value to us, or we may want you to return them direct to the foundry.

If we have made a mistake in filling an order, we will credit the goods at the price charged.

If you have made a mistake in ordering or your customer fails to call for the goods, we will give full credit, if returned promptly, provided that the goods came out of our stock or we can return them to the parties from whom we purchased them.

Goods must be returned promptly. If you hold them until you get an accumulation the expense of handling will be such that we cannot give full credit.

All accumulations will be subject to discount.

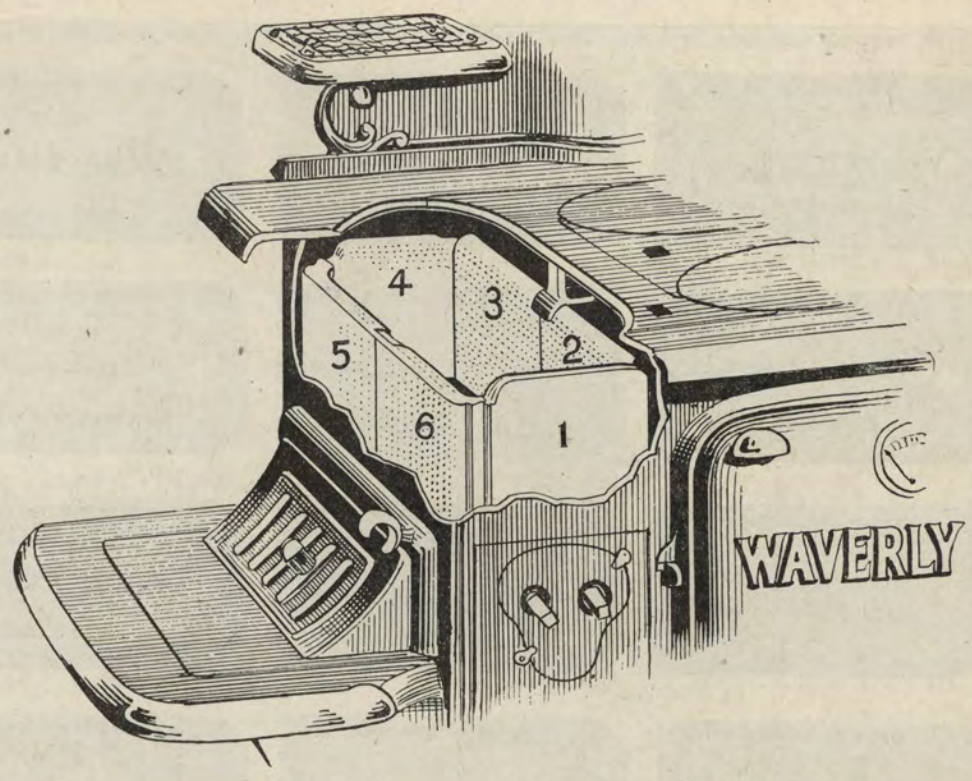
When Nos. 5 & 6 are **iron** (one piece) order as Front Grate.

If there is a thin iron plate between Nos. 5 & 6 brick and end of Range, it is called a Front Guard. Iron Ends, Front Grate or Front Guard are never sent on an order for linings unless specially ordered.

In this catalog the figure which appears before the name of range indicates the number of pieces of brick which comprise a set.



PRICE LIST OF BRICK LININGS

When linings cost more than regular price they are starred (*); the number of stars indicates the price.

The mark (†) means that the brick has a special price which will be quoted upon application.

When Front Brick or Back Brick are made in one piece it is rated as two pieces.

WE WISH TO REMIND YOU
That it is now time to have your heater and smoke pipe cleaned and repaired for Fall use. With accumulation of ashes and soot the summer months are more injurious to the heater and pipe than actual use.
We can do this work promptly. If you wait until Fall and repairs are necessary the foundries will be busy and cannot fill orders promptly.
Won't you please sign and mail the attached post card at once?

This is an illustration of our Window Advertising Sign; it measures 10 x 14, and the color is royal blue with white letters on metal.

WINDOW ADVERTISING SIGN

Our business was established in 1865. Reorganized and incorporated in 1903.

We specialize in supplying dealers with REPAIR PARTS for Stoves, Ranges, Furnaces and Boilers.

We realize that the REPAIR BUSINESS is one of great detail and we aim to assist customers in every possible way.

If customers will refer to this Catalogue when ordering repairs, much time and expense will be saved.

COOK STOVES AND VERY OLD STOVES AND FURNACES

Owing to the fact that the demand for repairs for Cook Stoves has practically ceased, we have omitted them from this book. We can, however, furnish everything which it is possible to obtain for any of these old cook stoves. We have also omitted a few of the very old Stoves, Ranges and Furnaces for whose repairs there is no demand. Order everything from us and we will furnish it if it can possibly be furnished.

We can frequently furnish repairs from our own patterns which the manufacturers cannot furnish; either because they are out of business or their patterns are destroyed.

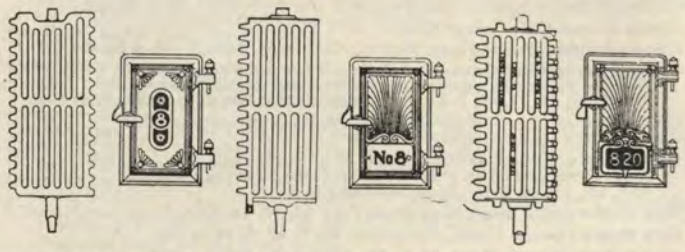
6 **Crawford Grand** (*Range*) Walker & Pratt Mfg. Co.
1st & 2nd Pattern 7, 8, Pl. 3rd Pattern 7–18, 8–18, 8–20, 9–20, Pl. & Triple.

The first Crawford Grand Range had Grates different from the present pattern. There are three patterns in all. The pattern may always be known by the number-plate on the door.



The first pattern has the number 7 or 8 on stationary name-plate

The second pattern has the number 7 or 8 on a swinging plate or wicket

The third pattern has the number 7–18, 8–18, 8–20, also on movable wicket.

In ordering plain grates, therefore, state the number in full, whether 7, 8, 7–18, 8–18, 8–20 or 9–20, and if the number is 7 or 8, state whether the number is on a fixed stationary plate or on a swinging wicket.
Triple Grates are furnished for the third pattern only.

STOVE AND RANGE REPAIRS

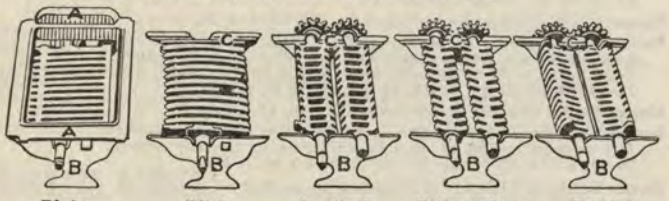
HOUSEHOLD RANGES.

White, Warner Co. Give full name of range as follows:

Dairy Household	Marine Household	Rugby Household	Sorosis Household
Gem Household	New Household	Secure Household	Special Household
Honest Household	Our Household	Select Household	Superb Household
Ideal Household	Rival Household	Social Household	etc.

Ranges are listed under their first names.
If range has enamel finish be sure to so state.

GRATES FOR HOUSEHOLD RANGES



Plain A—Brick Rest | **White** B—Front Grate Holder | **Dockash** B—Front Grate Holder | **Triangular** C—Back Grate Holder | **Duplex** C—Back Grate Holder

Most Household Ranges have no "grate bed" the grate is supported by "grate holders" and the brick by a "brick rest." If you order a "grate bed" or "grate frame" we will understand that a brick rest is wanted as this is the only bed or frame that the range has.

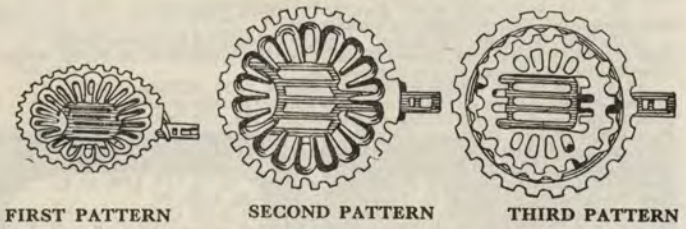
OAK ANDES GRATES



FIRST PATTERN

Used in all stoves numbered 114, 116, 118, 120, & 122.

Draw center marked O A 114, etc. according to size.

No. 122 Grate same as 120.

SECOND PATTERN

Used in all stoves numbers 214, 216, 218, 220 & 222.

Grate same as first pattern.

Draw Center was changed so shaker could be used through opening in ash door.

Marked on shank, O A 214 etc., according to size.

THIRD PATTERN

Made early in 1898, was afterwards changed in same year by reducing the size of outside ring or frame. The inside grate made more open than is shown in cut, with lugs cast on under side so as to vibrate grate when shaking.

Draw Center same as shown in cut and is marked, OAK A 214, etc., according to size.

This grate with frame will fit all Oak Andes numbered 214, etc.

If you wish Draw Center only, give the letters and figures on shank of same.

State which bar is wanted, counting from left to right as you face the heater, except on furnaces made by Richardson & Boynton Company, bars of which are numbered differently, see illustrations below.

Always give casting marks if possible.

In some heaters left and right hand bars are the same, allowance being made in the grate frame or ash pit or by reversing the cogs.

In some heaters, including the Magee, Howard, Richmond, &c., it is possible to put the left bars on the right hand side, and visa versa, so it is always best to give all marks on bars.

GRATES FOR RICHARDSON & BOYNTON FURNACES

Old Style Grate

New Style "E" Grate

Note that Richardson & Boynton Co. number their grate bars differently than other manufacturers.

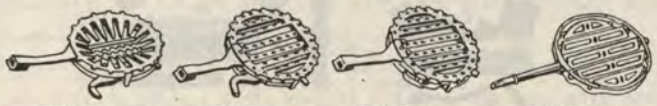
GRATES FOR PALACE QUEEN, PALACE KING AND PALACE DUKE FURNACES



1882 Grate 1884 Grate 1886 Grate 1888 Grate

Triangular

The 1884 grate is used in place of the 1882 grate as the 1882 pattern is destroyed.

The largest size of the 1888 grate is made with two more intermediate bars than the cut shows.

The triangular grate is made with 3, 4, 5, 6, or 7 bars according to size of furnace.

Hexagonal Grate

Every casting made by Russell Wheeler & Son and International Heater Co., has a pattern number cast on it. In ordering if you will give the pattern number of the part wanted you will avoid errors.

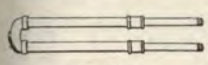
Price List of BRASS COILS for Ranges

We have listed the different styles of coils made by the manufacturers of the ranges.
If there is another style of coil in the range it is a "Home Made" coil.
If you do not find a range listed you will know that there was no coil made for it by the manufacturers.
Linings are furnished only for the style of coil made by the range manufacturer.
If the range has a "Home Made" coil the brick will have to be cut to fit the coil.

Styles of Coils

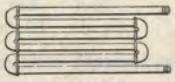


No. 2 Coil

No. 3 Coil

No. 4 Coil

No. 5 Coil



No. 6 Coil
(Used only in Monarch Hub Range)

Hanover Coil
(Used only in Sterling Ranges)

All our coils are tested by 150 lbs. water pressure.

We guarantee our prices of BRASS COILS to be as low as the manufacturers' prices. These prices are correct as of August 1st, but must necessarily be subject to change without notice.

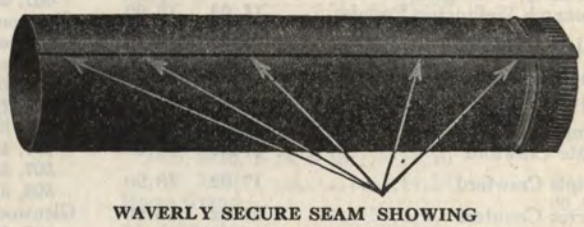
Showing the way the groove is formed before the seams are closed. The triple fold positively prevents the locked closed seam from opening or collapsing.



WAVERLY SECURE SEAM SHOWING THE PIPE MADE UP

Same formation from end to end. Cut it any or many places. Each piece has complete locked seam with original strength.

Waverly Secure Pipe is acknowledged by all who have used it to be the best stove pipe made.

Pipe is beaded 2½ inches from the small end and crimped. If so ordered, end can be turned in instead of crimped.

We cut our iron on a taper from large to small end, so that when the joints are put together they hold the full length of the lap. This avoids the necessity of wiring up your pipe every few feet.

WAVERLY SURE LOCK NESTED STOVE PIPE

The pipe is put together by simply hooking the edges together in the usual way, then placing the joint on a mandrel stake and closing the seam with a mallet.

Note the way the groove is formed. The triple fold positively prevents the locked seam from opening or collapsing.

When made up, joints may be cut in any or many places; each piece will have complete locked seam with original strength.

Joints are beaded 2½ inches from the small end.

We cut our iron on a taper from large to small end, so that when the joints are put together, they hold the full length of the lap. This avoids the necessity of wiring up your pipe every few feet.

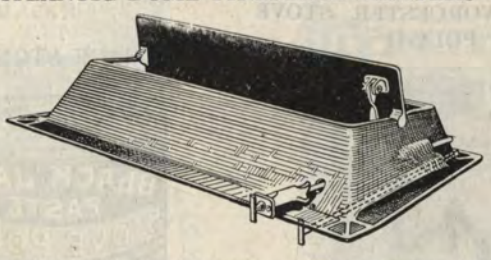
ATLANTIC DOME FIREPLACE DAMPERS



TWO OPERATING POSITIONS: — The operating spindle, in full lines above, passes through a protecting sleeve — the brick being cut away. A neat face plate covers the opening in the brick work or tiling. If preferred, the operating handle may be located just below the front edge of the damper — as indicated above by dotted lines.

REMOVABLE LID: — A dislodged brick or other cause may necessitate taking out the dampler lid — accomplished merely by releasing the cotter pin at either end of the operating connector shown above, without disturbing the masonry or other construction.

NESTING: — may be "nested" or piled at a cost of only 1½ inch each above the first.

CONSTRUCTION: — The frame is a strong, smooth one-piece casting and the lid is also cast. Points liable to breakage are made extra strong. Diagrams and simple instructions for assembling are included in the box of operating parts.

SKUTTLE RADIATOR CLEANER

"A Little Soot Wastes a Lot of Heat"

Here is a Furnace Room Tool That Nineteen Out of Every Twenty Furnace Dealers Need

Adjusts to Any Length

The Skuttle Radiator Cleaner reaches more than half way around the radiator either way, so that you can reach soot farthest away from the clean-out door. It telescopes or folds for long or short lengths. The handle is rigid when unfolded and it is easy to hold the scraper above the soot while reaching back to the farthermost part of the radiator.

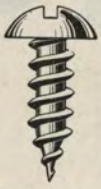
KALON HARDENED SHEET METAL SCREWS

(Licensed Under Parker Patents)

Cheaper and Easier to Use than Stove Bolts or Rivets — and Just as Good

Cuts into the metal like a tap. No danger of stripping the thread as the Screw is hardened by a special process to prevent this.



Threaded to the head so that the metal can be drawn up flush with the head of the Screw. Can't back out or get loose.

3/4 inches No. 10
Actual Size

Sheet metal shops, everywhere, use these Screws for joining heating and ventilating ducts; for making furnace casings and fittings and for putting up long runs of furnace pipe; on cornices, blower systems, hollow metal sash and doors, metal garages; in fact, on sheet metal work of every description. The screws enable them to turn out the work in half the time and with a quarter of the effort required when stove bolts or rivets are used.

To use them, first punch a hole a trifle smaller than the diameter of the Screw being used through as many sheets of metal as are to be joined together. Then, with a screw-driver, turn in the Screw as you would an ordinary wood screw until the metal is drawn up absolutely tight to the head. The tighter the Screw is driven, the stronger the fastening is made. That's all there is to the job.

The Screws are made in four sizes. Packed one gross of a size in a box.

THE LEO-NITE DRIPLESS SMOKELESS BROILER

Made of cast steel Aluminum in two sections, with cold handle. Can be used on any kind of a stove.

It is a well-known fact that the products of the Frying Pan are a source of Indigestion with all its attendant evils. Any physician will verify this statement. THE LEO-NITE overcomes these evils; the heat being drawn up and around the Steak, Chop, Bacon, etc. By the action of the heat current around the tubular channels, running to the main reservoir, 60% of oxygen combined with the flame gives an intense and steady heat — making it unnecessary to use a high flame. **Hence, use only a low, Blue Flame on Gas, Oil, or Gasoline Stoves.**

IDEAL AIRID SIPHON VALVE

Valve shown one-half size.

This valve will operate under more adverse conditions than any valve made. Varying steam pressure, flooded radiators, forced firing of the boiler and other unfavorable conditions frequently encountered, are readily overcome by the IDEAL AIRID Siphon Valve, without attention and without adjustment.

The IDEAL AIRID Siphon Valve is equipped with a siphon or drain tube extending into the radiator, which instantly drains the water out of the valve, leaving it free and open to rid the radiator of air. This action is never failing even under excessive pressure, and leaking or sputtering is entirely eliminated.

It is simple in construction, made entirely of metal, and has no perishable parts to wear. It requires no adjustment. No attention is needed to insure proper operation at all times.

The main top of each of these cookers has the Barstow Patented Recessed Gas Cocks encircled with nickel plated cups. Set down in the main top; an ideal location, as neither the apron pocket or other clothing can catch on the gas cock heads. This safety feature is found on both the three-burner and four-burner Cookers. Detachable Nickel Rail.

The giant burner on each Cooker top has a simmering burner in the center, controlled by a special and separate gas cock. Instructions for operating are cast into its nickeled cup showing just which way to turn the handle when one wants to use the simmering section only, the complete burner, or when the gas is to be turned off.

The Burners are lighted with a Rutz Swing Type Automatic Lighter

IMP

SOOT KILLER AND FIRE EXTINGUISHER

Cleans stoves, furnaces, pipes, chimneys. Removes all Soot. "IMP" makes chimneys as clean as a whistle in 5 minutes.

YOUR chimney may catch fire — Let "IMP" clean it now.

Safeguard your home—Always keep "IMP" on hand. It may save you many dollars and immeasurable personal loss.

No dust, no smell, no noise, no flame, no explosion, no mess, no covering up of furniture and cleaning up afterward. No bother at all. Just put one little package of this powder into stove or furnace, onto HOT BED OF COALS, close covers, open all dampers leading to chimney.

Children and everyone can use "IMP." "IMP" is cheap, safe, clean and sure. Easy to use "IMP."

Nothing to open or scatter, — just place the package itself on the fire and the job is done. Full direction on packages.

Fifteen Reasons Why Security Ovens are Attractive, Efficient, Convenient and Economical

1. Strong double seams closed on heavy presses.
2. Air chambers, top, sides and back.
3. Asbestos insulation.
4. Crimped Bright Tin Plate Lining.
5. Embossed beading adds rigidity.
6. Follansbee Polished Sheets highest quality uniform Blue.
7. Two strong racks. Rods run from bracket to bracket. Each rod forms independent support—will not slip or collapse **(rods of inferior racks run opposite direction and entire weight rests on two rods.)**
8. Double stationary Baffle Plate—oval bottom and perforated ends distribute heat evenly—curved bottom prevents flames from touching bottom of oven.
9. Draft system—openings at bottom outside, top and bottom inside.
10. Bottom opening to fit burner.
11. Substantial Door Supports placed below door will save your arms from burns.
12. Perforated Bright Tin Windows for observing flames.
13. Doors deep drawn and embossed on heavy power presses. Rigid and level—fit tightly.
14. Nickeled Alaska Handles. Nickeled Alaska Knob that holds door tight against oven **(one good knob and two good hinges are enough for any good door. Two knobs necessary on flimsy construction but not required on Security doors.**
15. Three brackets for racks.

The above does not refer to Baby Security Ovens Nos. 50 and 55 which are of a different design.

NESCO OIL COOK STOVES

Color — beautiful grey with black horizontal surfaces and black legs. Chimneys are turquoise blue. Dome shaped leveling screws on each leg.

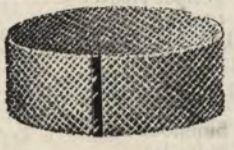
THE SECRET OF SUCCESSFUL OPERATION IS IN THE BURNER

There rests the famous non-burnable Rockweave Wick in the bowl or channel of the burners. The pointer handle swings from side to side and raises the whole burner and chimney up, or lowers it by a toggle joint, thus turning the flame down or up.

A lifting rod raises the chimney for lighting. Chimney drums are turquoise blue enameled.

A wrench is permanently attached for tightening the packing nut over the sliding joint of the feed pipe line.

Here's the famous Rockweave Wick. Asbestos strands are spun around fine wire. These strands are then woven as you see in the picture. Long lasting, flexible, strong, easy to clean. Rockweave.



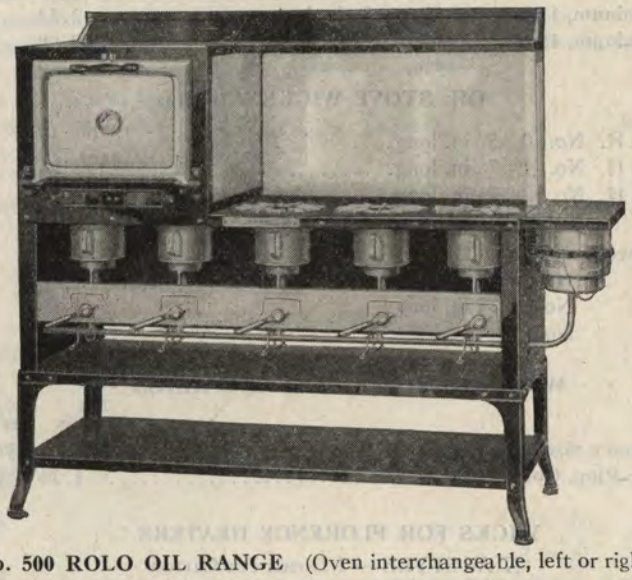
Simplicity is one of the greatest characteristics of Nesco Oil Cook Stoves. This is so because there are no ratchets and gears to stick. Turning up and down is done by simply turning the pointer handle from one side to another. This lowers and raises the burner by what is called a toggle joint in which there is simply a pivotal point from which the arm lowers or raises, carrying the burner with it. There are no other movable parts — and these are in plain sight.

The wick which should be removed for cleaning is easily taken out after the blue chimney is taken off. The wick is then simply pulled out, cleaned and as easily put back again.

Lighting is accomplished by raising the blue chimney drum by lifting up on the lifter rod to the left of the pointer handle, touch the match, lower the chimney, turn it left and right to seat it, turn pointer handle to burn, and the flame will soon come to cooking height.

Filling of the tank is as easily done. Take the glass tank out and set on table or floor, remove cap, fill, replace cap, and set the tank again in its place. The oil automatically flows as needed.

A stove that burns a flame like gas, one that is simple in construction, easy to handle, easy to clean, then always ready — such is the Nesco Oil Cook Stove.



No. 500 ROLO OIL RANGE (Oven interchangeable, left or right)

Many thousands of women are using these stoves and getting great satisfaction. Relief from stove drudgery, from heavy lifting of coal and wood, from ashes and dirt, and from heavy expense are the immediate and pleasurable results.

Gasoline Fire Pots and Torches

CLAYTON & LAMBERT MFG. CO.

SINGLE NEEDLE FIRE POT FOR TINNERS

No. 80 — FIRE POT

Capacity One Gallon

Our new improved No. 80 Single Needle Fire Pot produces an intensely hot noiseless blue flame buring perfectly either high or low test gasoline. The superheated gas which passes through many small holes in the burner plate tubes burns from both sides toward the center. A sub-flame permits turning the heating flame low between jobs, thus saving fuel expense. The top section cast iron, tank of heavy gauge drawn steel, reinforced, fitted with Patented Cushion Band at the base which protects it from injury and makes the tank leak-proof. The metal is heavily coated with tin both inside and out, thus preventing rust. The ideal Fire Pot for either indoor or outside work under severe weather conditions. A pair of coppers up to twelve pounds can be quickly heated and a 6″ pot of metal melted at the same time.

No. 80 Fire Pot, Gallon..... $36.10

COIL FIREPOTS FOR GASOLINE FOR PLUMBERS

No. 22—Fire Pot

Capacity One Gallon

The No. 22 Fire Pot is the latest improved, up-to-date Coil Fire Pot, made with seamless drawn steel tank, tinned inside and out (rust proof), large funnel and dust-proof filler plug, heavy uprights, large valve, cushion protection band at base of tank and heavy malleable top plate. Patented three piece coil cup and top plate enables the user to remove the top section by unscrewing three large nuts exposing the burner and coil. There are no coil cup lugs or small nuts to burn off. Air pressure is produced by means of an automatic brass pump.

DOUBLE NEEDLE TORCHES FOR GASOLINE

No. 208—Torch

Capacity One Quart

The No. 208 is the most powerful Quart Torch ever produced. It saves time in doing the work, is very economical in operation and is recommended for the general use of the mechanic. It is guaranteed to work perfectly in the wind and in weather far below zero. Burner has cast hook and support for holding soldering copper. Burner hook is removable.

List

No. 208 Torch, Quart $19.00

SINGLE NEEDLE TORCHES FOR GASOLINE
Hook is Removable

No. 32 — TORCH

Capacity One Quart

The No. 32 Torch has been the favorite with mechanics for many years. Improvements have been added from time to time giving the user the best possible service and the new burner which has wonderful generating power now places the No. 32 far in the lead of all other single needle torches. It produces over 300 degrees more heat than any Torch on the market burning low test fuels perfectly. The tank is of heavy gauge brass strongly reinforced on the inside. The pump and all fittings are the very best and the sturdy construction of this tool is well known to thousands of users. No. 32 saves time and fuel and will outlast two ordinary Torches.

No. 32 Torch, Quart $18.00

SINGLE NEEDLE TORCHES FOR GASOLINE
Hook is Removable

No. 144 — TORCH

Capacity One Quart

The No. 144 Torch is made to meet the demand for a cheap competitive tool. The quality is the best that the price will warrant and the No. 144 will be found superior to any other make. The Heavy gauge drawn brass tank is made with funnel shaped bottom. Burner is of bronze metal and has the open type generator that injects the air which mixes with the gas, producing a steady blue flame. The hook on the burner can be unscrewed and laid aside if it is not needed.

Air pressure required for operating the torch is quickly produced by the automatic brass pump.

No. 144 Torch, Quart $15.00

SINGLE NEEDLE TORCHES FOR GASOLINE
Hook is Removable

No. 146 — TORCH

Capacity One Pint

The No. 146 Torch is of the same construction as No. 144 but smaller, pint size, fitted with hook and support for holding a soldering iron. Hook is removable. Shipping weight each, 3 lbs.

No. 146 Torch, Pint $14.00

Every housewife knows the comfort and convenience of an every-ready supply of running hot water. For the baby, for the children, for dishes, for washing, for bathing — for every household use.

This convenience of hot water *on tap* may now be enjoyed in homes *everywhere* — in the country, and in towns where gas is not available.

A FLORENCE

Kerosene Water Heater (One-Burner or Two-Burner) can be installed in your kitchen or basement. It will supply all the hot water needed — quickly, easily, with no trouble, and at a cost unbelievably low — a few cents a day. It saves hardship and labor, and eliminates the undesirable, almost unbearable, discomfort of coal fires.

The New One-Burner Water Heater presents a high quality product that is efficient, economical in operation, and with a low initial cost.

POWERFUL, DEPENDABLE BURNER

It is equipped with the new over-sized, high-powered 15″ Florence Burner. This is the same famous burner — only larger — used in the nationally known Florence Oil Cook Stoves. It *focuses* the clean, hot, kerosene-gas flame close-up to the copper coils.

TWO-BURNER

Two standard economical — powerful Florence burners *focus* their intense heat directly on twenty-eight feet of ½″ (outside dimension) copper tubing made into two spiral coils.

The patented water leg extends down between the two powerful burners. This is a non-porous brass casting in which the water is *preheated* before entering the coils.

A Florence, One-Burner or Two-Burner, heats water faster than most kerosene water heaters on the market at the present time; and under normal domestic conditions heats a 30 gallon tank at a cost of 4 to 4½ cents.

It is wickless and has no valves, floats, or other mechanism to get out of order. The heat can be *easily* and *positively* regulated through several stages — by a turn of the lever.

QUICK, EASY INSTALLATION

A Florence Water Heater can be quickly and easily installed. It can be hooked-up with any 30 gallon range boiler (vertical or horizontal) as an independent unit or an auxiliary to a furnace or kitchen range hot water system.

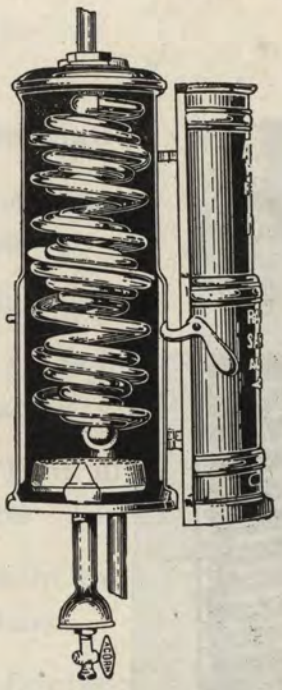
ACORN GAS WATER HEATER



The outside jacket consists of heavy cast iron plates. **The lower** half, where the heat is most intense, has a double wall with air space between the inner and outer shells.

The tubing, which is of small diameter, is formed into three spiral coils, one within another. Thirty-two feet of pipe through which the water must pass, exposes the water more thoroughly to the heat and raises it to a much **higher temperature** with the **same amount of gas.**

The water divides into three streams, each subjected to a most intense heat. It rises rapidly, becomes hotter as it goes and traveling faster as it nears the top where it reunites and is carried into the tank.

The burner produces a perfect combustion and utilizes every heat unit in the gas. By means of three cast iron deflectors the heat from the burner is staggered in and out through the coils so that the greatest possible efficiency is obtained.

If you would have plenty of hot water quickly and cheaply, put an Acorn Triple Coil Water Heater in your home.

Smoke outlet circumference, 9¼ in.

List

No. 3 Acorn Triple Coil Heater $34.00

THE STACK GAS WATER HEATER

is constructed on lines and principles radically different from those of any other gas water heater.

The cold water, entering at the bottom, is divided into many thin streams, each enclosed in a copper tube, and exposed directly to the full strength of the flame.

Comparison with Ordinary Competitive Heater

	Ordinary	*Stack*
Initial Temperature of Water	54°	54°
Temperature after 6 min. run	115°	154°
Temperature after 12 min. run	119°	166°
Temperature after 30 min. run	134°	178°

The competitive coil heated 15 gal. of water average 40° rise in 30 minutes, burning 30 cubic feet gas = efficiency .3030

Stack heated 15 gal. of water average 79° rise in 30 minutes burning 30 cubic feet gas = efficiency .72

This would indicate, based upon the cost of gas in Boston, that the Stack Heater would save in gas bills approximately $1.96 per month to a family of four who use the average amount of hot water for toilet and kitchen purposes.

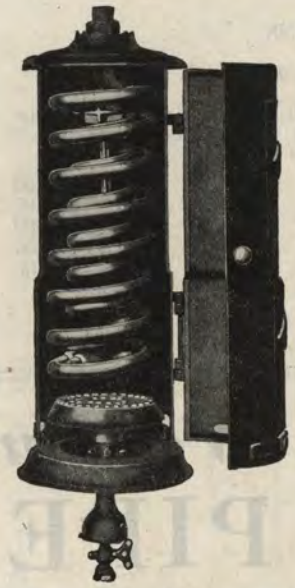
SANDS GAS WATER HEATER
Fitted with Red Metal Unions



The Whirling Burner forces its intense heat directly into the coils.

The Specially Designed Baffle Plate distributes the heat evenly to all parts of the coil.

The Handsome Cast Jacket fits snugly about the compact double copper coils. (Note the construction.)

The Compact Double Copper Coil absorbs every particle of heat from the burning gas.

Coil is like on both ends. Can be turned upside down giving twice the wear. This exclusive **Sands** feature prevents coils burning out.

Safety — The Gravity Hinged Self Closing Door is half the jacket — prevents explosions and makes inside of heater easily accessible. All connections are solidly brazed to insure against leaks.

CONVENIENCE

Ample Hot Water always at just the temperature you like.

A pint, a pail or a tubful stored ready for instant use in the Rex Storage Heater. The water stays hot. When drawn it is instantly replenished.

The Tank is insulated so as to retain the heat. The Rex Heater quickly replenishes the supply as it is used.

Hot Water is instantly available in any quantity and the temperature is maintained at just the heat desired.

Operates so economically and priced so low, everyone may have it.

May be installed easily in basement or kitchen without changing the plumbing system. Designed so that a bucket may be filled direct from the tank.

The REX is easy to light.

Operates automatically.

Requires a minimum of gas.

Made in various sizes to meet every requirement.

CONSTRUCTION

Heater — Copper Coil — Porcelain Enamel Jacket, Copper Coils of extra heavy 18 Stubbs gauge.

Burner — One piece, drilled raised ports, gauzeless.

Extra large brass water circulating connections on inlet and outlet to boiler.

Thermostat — Positive Snap Action. Easily Adjustable Union connections throughout for easy installation.

Tank construction — extra heavy copper.

Insulation — hair felt.

Outer tank covering of 24 gauge galvanized sheet metal finished in gray enamel.

Each unit equipped with Rex (all Aluminum) Down Draft Diverter.

Easily installed in basements with low ceiling.

Bucket high from floor so sediment can easily be drained from tank by drain cock.

Permanency of Temperature is obtained through the combined action of the automatic heater and exceptional efficiency of the insulation material.

In covering the tank the best hair felt is used.

The REX (all aluminum) Down Draft Diverter and a pressure relief valve are included as standard equipment. The needle adjusting valve permits the use of the heater with all of the widely varying kinds of gas encountered throughout the country. It will operate very efficiently on either the very leanest gas or the richest distributed.

The material used and workmanship employed are the very best.

The tank is "extra heavy" copper, wrapped with a thick blanket of hair felt and enclosed in an aluminized jacket. The side arm heater is of the double copper coil type. The coils are wound of extra heavy (18 gauge) seamless copper tubing. The heater couplings are brazed to the coils.

The tank is finished with enamel — easy to keep clean. The Heater is Porcelain Enamel. The sanitary high leg base is practical and attractive in appearance.

OPERATION

The Rex Automatic Storage Heater relieves one of any thought of "Is the tank lighted?" There is always abundant hot water automatically available.

The Thermostat is snap acting — requires no adjusting and performs *automatically* the moment more heat is needed.

Once set for moderate hot water — that temperature is maintained. If a higher temperature is desired, it is easily reset accordingly.

The Pressure Relief Valve is the latest type and approved by the Underwriters. Special Pilot Control.

Distinct advantages are obtained with The Rex Automatic Storage Heater, such as: uniform temperature; sparking clear water free from sediment; low cost per gallon in operation.

ARCO TANK FOR COAL BURNING

Where a gas supply is not available, if coal is preferred as fuel, the coal burning Arco Tank will meet every requirement. Made of 1-8" cold rolled steel for sides and 3-16" top and bottom, it will last a lifetime. Exterior jacket finished in gray porcelain enamel. Dead air space insulation and special gravity circulator insures a minimum heat loss with positive circulation and uniform temperature of the water. Water surrounded firepot, seamless construction and the automatic regulator results in proper control of fire for any desired water temperature. Completely equipped with thermometer and automatic regulator.

ARCO TANK FOR GAS BURNING

For those who prefer the use of gas as fuel, the gas-burning Arco Tank offers the utmost in efficient operation, convenience, gas economy and durability. The correctly proportioned and designed combustion chamber insures clean, odorless operation. Positive water circulation and automatic thermostatic control maintains a uniform temperature of the water. Can be adjusted for any desired water temperature. Equipped with patented brass burners which give a broad, clean flame. No fuel waste: cannot become clogged or corroded. Completely equipped with burners, thermostatic control, thermometer, diverter hood. Shipped complete ready to set up.

Special Combination Range

Occupies only Thirty-six inches

Has Three Full-Sized Ovens

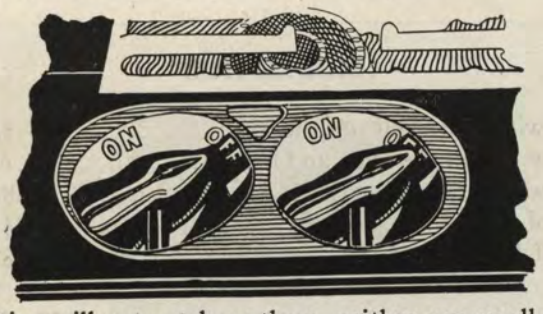
The main top of the F-25 Special Combination Range has two 8" coal covers. Four gas burners, a simmering burner and an automatic lighter equipped with shut-off cock; combined with the elevated gas ovens give the service of a full sized gas range for summer cooking, for hurried meals.

The F-25 Special Combination Range has the damper control in a new convenient location. The words "BAKE" and "KINDLE" cast into the nickeled operating plate show how it is operated.

Here is another "difference." A new type indicator with oblong dial placed at the side of the oven, making possible an unobstructed view of the baking at all times through the Pyrex glass panel.

All these conveniences, all this cooking space, yet the F-25 Special Range is so compactly designed that it occupies only thirty-six inches.

The gas cock location on both the C-23 and the F-25 Combination Ranges is a Barstow patented feature. The gas cocks are encircled with removable cups so that their heads come just below the level of the main top.



Clothing will not catch on them, neither can small children reach them. This is a safety feature worthy of consideration.

Heat or not as desired with the C-23 Combination, and the F-25 Special Combination Ranges. There are many days in the late Spring, in the early Fall when with a coal or wood fire it is unnecessary to run the heating plant to remove that "chilly feeling." In severe winter weather a continuous fire will always keep the kitchen comfortable.

THE RIVERSIDE

RADIONA

No. 2-6 W. B. Radiona
A Necessity clothed in Beauty

Finished in Walnut Brown porcelain enamel and grained to imitate high grade wood furniture. Operates on the principle of a warm air furnace. Circulates warm, moist air which affords an even, comfortable temperature in all connecting rooms.

Finish guaranteed to hold its lustre and not to crack or chip from heat.

Furnace built, 12 gauge refined boiler iron body, reinforced by heavy angle iron braces. Body fits into deep cup joints in top of 50 pound firepot. Thoroughly cemented and strongly bolted. Four inch high gas ring protects drum and firepot joint.

Easy to install and does the work of two or three old-fashioned stoves. Only requires the same amount of fuel as one ordinary heating stove.

Fitted with Draw Center Ball Bearing Grate.

Finish, Walnut Brown

Fitted with "Out-of-Sight" Stove Board

Will heat from two to six rooms.

SPECIFICATIONS

Height over all	46½ inches
Width over all	25½ inches
Weight	400 lbs
Weight of Firepot	50 lbs.
Diameter of Firepot	15 inches
Feed Door with Smoke Apron	10½ x 14 inches

DUPLEX RADIONA

No. 2-4 W. B. Duplex Radiona

Oblong or Console type No. 2-4. Operates on exactly the same principle as the No. 2-6 and the finish is the same.

This type burns hard coal, coke, soft coal, and wood with equal satisfaction.

The design is exceptionally beautiful. It closely resembles a piece of fine furniture, adds attractiveness to any room in which it is used, while at the same time, it does a wonderful job of heating.

Fitted with Duplex Grates.

Will heat from two to five rooms.

SPECIFICATIONS

Height over all	47 inches
Length over all	27 inches
Width over all	20 inches
Weight	325 lbs.
Firepot length at top	19½ inches
Firepot width at top	11 inches

AERONA

Aerona No. 1-4
Priced very Low

The Aerona is the lowest in price and the highest in efficiency of anything in its class. It is beautifully enameled in imitation of grained walnut on Armco steel.

Base frame made of angle iron. Large enameled water pan with swing cover.

The main top has large openings for free outlet of the hot air.

Constant circulation at all times.

Nothing equal in durability, efficiency and appearance has ever been made at its price.

A very efficient hot-blast draft is provided by register in feed door.

The casing stands 3 inches away from inner unit at near point on sides and 4 inches away at the back.

This means large air passing space and large heating capacity.

Heating drum fits over a high flange at top of fire pot, is bolted every two inches, and securely fastened to feed chute and combustion dome at top.

Fitted with Draw Center Grate.

Will heat from one to four rooms.

SPECIFICATIONS

Height over all	46½ inches
Body made of Boiler Plate	14 gauge

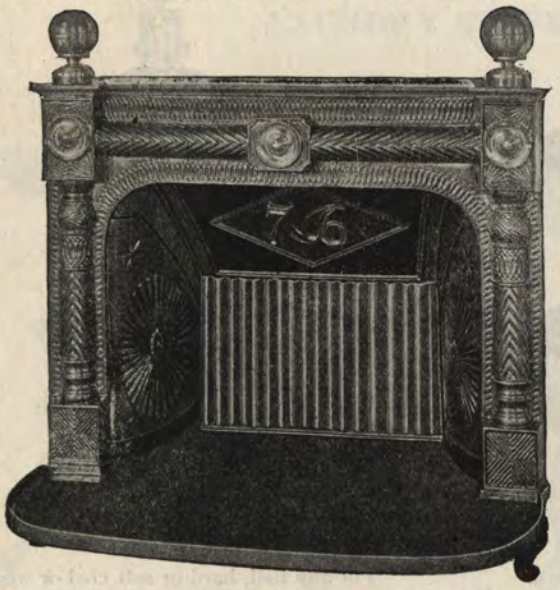
ANTIQUE FRANKLIN

Invented and Used by Benjamin Franklin in 1740



The ornament of this '76 Franklin Stove is in low relief and is an exact reproduction of the old styles, having been taken from a truly antique stove of old Pennsylvania origin. The finish is that of dull wrought iron, and is admirably set off by the bright corner ornaments and rosettes. The fire box is correctly proportioned and can be operated with either coal (in connection with a basket grate) or with andirons for burning wood.

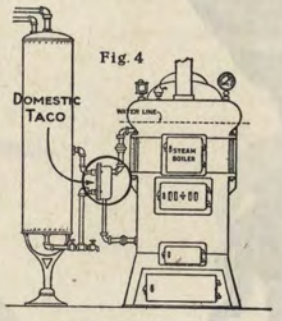
DOMESTIC "TACO" WATER HEATER

For Use with Steam or Vapor Heating Boilers

To be installed at the side of the heating boiler, **below the water line,** as shown. The connections to range boiler are as usual, it being installed vertically on the same floor level as the house heating boiler or on the floor above if desired.



The boiling water within the heating boiler circulates through the "TACO" Heater and in doing so transfers heat to raise the temperature of the domestic water supply passing through the copper coil. This heat transfer is a continuous process and the storage tank is kept filled with **hot** water.

No firing tools furnished with these boilers.
When hot water supply boilers are subjected to unusual pressure we recommend that a water pressure reducing valve and relief valve be used.

These boilers are built according to A. S. M. E. Standards. The maximum allowable working pressure is 40 pounds per square inch. If required to work under higher pressure, boilers should be specially tested at 2½ times the required pressure.

Johns-Manville Improved Asbestocel

MAXIMUM HEAT AT MINIMUM COST

Because the corrugations **both ways** provide a construction through which air cannot circulate freely (as through "Air Cell"); consequently it saves more heat. Stronger and more efficient than "Air Cell." When you understand the difference between it and "Air Cell," you will specify and use **IMPROVED ASBESTOCEL** — an improved insulation at a low price.

WAVERLY ECONOMY FURNACE

THE RADIATOR

The cast iron radiator is the crowning Economy feature. Extra large, it has much more than the usual amount of radiating surface. Its single joint is packed with asbestos rope and asbestos cement so no gas can escape. Its construction allows large volumes of air to pass over the hottest part of the fire utilizing all the warmth possible from every pound of fuel.

THE COMBUSTION CHAMBER

The large combustion chamber allows ample space for proper combustion. The curved construction of the feed chute provides free flow of air and adds strength to the unit which is subject to intense heat.

OPENINGS

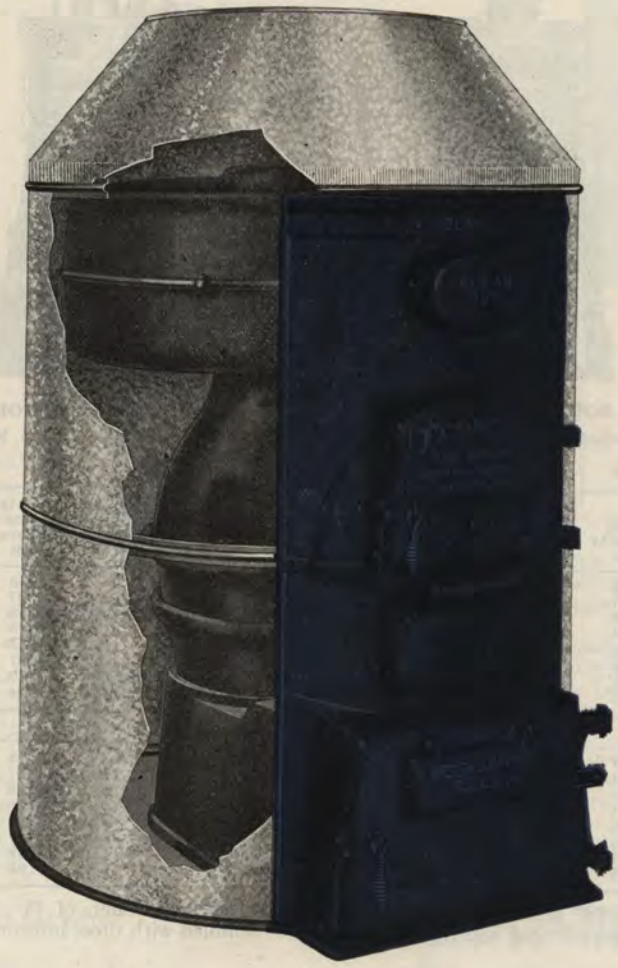
For Domestic Water Heater.

THE FIREPOTS

Two piece firepot allows for expansion and contraction. Heavily flanged, reinforced cup joints are used where castings join. Smooth straight sides insure clean fire. No ashes cling to its surface.

THE BASE

Moulded deep, the pan-shaped base increases ash capacity and its sturdy construction forms a solid support for the castings. The base ring is made in four sections to eliminate unnecessary weight and the danger of breakage in shipping.



CLEANOUT OPENING

Extends through front; provides for easy access to flues.

UPPER FRONT PANEL

Distinctive blue upper front panel easily put in place without bolts or screws. Narrow to prevent excess heat loss through radiation.

LARGE FEED DOOR

Makes heater convenient to fire and will remain open at any point. Extends through front making gas leakage impossible. Cold drop handles fitted to both feed and wire ashpit doors.

HINGE AND CATCH LUGS

Bolted to front and held securely by lock washers.

HUMIDIFIER

Large securely fitted humidifier in front between feed and ashpit doors, being convenient to fill. Two and one-half gallons capacity.

LOWER FRONT PANEL

Slips into position over finished frame cast on the ashpit and is firmly held in position without bolts or screws.

ASHPIT DOOR

Large ashpit door allows easy removal from large space below grates. Extends through front, preventing gas leakage.

GENERAL DESCRIPTION

The distinctive beautiful blue front gives individuality to the heater, raises it above the commonplace and makes it an attractive piece of equipment of which the owner may justly feel proud.

But more important than its appearance is its construction which makes for long usefulness and economy and cleanliness in operating. Contributing to this are the large, roomy ashpit and its tight doors; the large tightly fitted ashpit door permits the easy removal of ashes from the large space beneath the grates. Triangular grates, which may be easily shaken, crush the ashes and clinkers and allow the firebed to be carefully cleaned. A big conveniently located humidifier is found in the front just below the large feed door. Cold drop wire handles are placed on both the feed and ashpit doors. The ashpit, feed chute and radiator openings extend through the front so that no smoke, gas or dust can leak into the warm air chamber. The cleanout opening at the front of the radiator, extending through the front, provides easy access for the removal of soot that collects and enables the owner to receive full value from the clean radiating surfaces of the heater. When properly erected this construction positively eliminates nuisance and makes any house warmed by an Economy a clean, luxuriantly warmed and humidified home.

Coil openings at the side of the feed chute provide for the use of a Domestic Water Heater.

In the production of the Economy attention has been given not only to making the heater attractive and easy to operate but, in addition, high quality raw materials have been combined with skillful design and manufacture. As a result, the Economy will give excellent service under hard and continuous use for many years at an economical cost for operation.

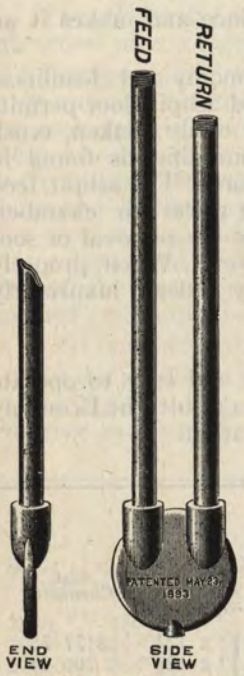
WAVERLY DISC COMBINATION HEATERS

For Use in Stoves and Furnaces



This disc is designed for all kinds of combination work where both air and hot water are desired, and can be used in almost any furnace.

The disc is made of malleable iron with only one-half inch waterway and being located in the fire entirely exposed to the direct rays of heat, rapid and positive circulation is assured.

Both feed and return pipes pass out through the top of the heater — is very easily adjusted and occupies an independent position in the heater.

To be hung directly in the fire.

Note.—Owing to the wide variety of apparatus in which these Heaters can be used, and the different positions in which they may be placed relative to the fire, the ratings given are only approximate.

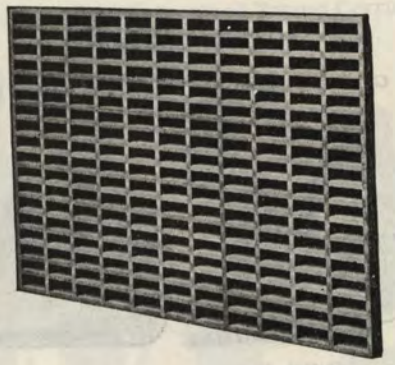
TAMBO FINISH ON REGISTER FACES

Some of its advantages

1. Looks like Electro-plate but costs only slightly more than black.
2. Costs same as white Japan finish.
3. Costs less than oxidized copper.
4. Does not tarnish, crack or chip off.
5. Because of its velvety neutralizing tone, it fits in with all interiors and any hardware.

WOODEN REGISTER FACES

For Cold Air Ducts



Made of Oak.

These faces are made of Oak strips 5-16 of an inch thick by 1⅛ inches in width, into which cross strips 5/16 of an inch square are glued in grooves made to receive them. The square strips are let into the larger strips in such a manner as to make the top of the face even.

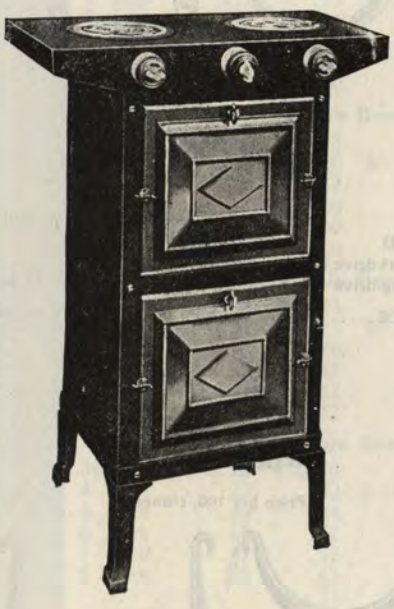
WHITE CROSS ELECTRIC RANGE



These ranges are of sturdy construction and differ from the higher priced ranges only in so much as all unnecessary expense in building is eliminated, making possible a range that will last as long and serve as well as those of higher price.

The materials used in the manufacture of these ranges, such as heating units, switches, wiring, etc., are of the finest quality obtainable. The range is black rubberoid finished, non-rusting and easily kept clean.

The heating units will not warp, crack or burn out even though cold water is dashed over them while they are red hot.

SPECIFICATIONS

Ranges are 34″ high, 14″ wide and 12″ deep. The top is 12″ x 22″ with two cooking units, each operating independently of the other, regulated by a two way (on and of) switch. The oven measures 12″ wide, 10″ high, and 11″ deep with a warming closet directly above of the same dimensions. It is double walled throughout, asbestos lined and is equipped with two heating units, one at the top and one at the bottom, regulated by a four-station, three heat (low, medium and high) switch. Top plate units draw 5 amperes each. Oven units draw 4 amperes at top unit and 6 amperes at bottom unit.

The range is made of the best grade of sheet steel throughout, nickel trimmed, polished blued steel doors, has four 8″ cast iron black enameled legs and is finished black enamel.

FLORENCE
UNIVERSAL OIL HEATER

Answers a thousand wants in Garage, Home and Shop.

The New Florence H2 is an entirely new type of oil heater. Attractive, dependable and powerful, it is adaptable to many uses and answers a thousand wants.

It consists of two drums connected near the bottom by a flame-proof passage 12" in diameter. The rear drum is an air passage. The front drum contains the burner and serves as a combustion chamber.

Cold air entering the top of the rear drum is drawn to the bottom and through the flame-proof passage to the front drum where it is thoroughly heated by the powerful Florence burner and directed out into the room through a vertical opening about 12" in diameter near the top of the front wall.

An attractive cast-iron grate covers the top of each drum. The facing ends of these grates are closed. These solid ends and a shield between the two drums prevent heating of the cold air passage by the front drum.

A GARAGE HEATER

This New H2 Heater has been formally approved by the Massachusetts State Fire Marshal for use in garages.

The air supply is taken about three feet from the floor. This means that the burner is fed good clean air, free from the inflammable vapors that lie near the floor.

Both openings on the front drum — the cold air in-take from the rear drum and the hot air outlet shown in the above illustration — are flame-proof. They are covered by *double vertical* safety screens, made of heavy perforated brass. "Double" — to give extra protection. "Vertical" —to prevent collecting soot and dirt.

Safety is assured because it is impossible for a flame from the interior to pass out through these screens. This protective feature is founded on the well-known scientific principle — that on which the miner's safety lamp is built.

LIGHTED ELECTRICALLY

The high-powered 15" Florence burner on this New H2 Heater is ignited electrically. Simply turn the lever to "Light Here," press the button and the kindler is lighted — the burner is in operation.

A spark plug in the burner bowl is excited by four dry cell batteries. Pressing the button switch on the front of the battery box (under the oil reservoir) causes a spark to jump across and ignite the saturated kindler.

A spring automatically throws the lever from "Light" to first burning position. The face of the door and door casing are machine ground to an exact fit — forming a flame-proof joint.

STRONG, SELLING FEATURES

Above the burner and running diagonally across the front drum is the heat deflector — a piece of *porcelain enameled* sheet steel that distributes and directs to the hot air outlet the focused heat of the Florence burner. A flame-proof wall between the heat deflector and the top grate prevents heat escaping through the top of the drum.

The metal tank with glass bull's-eye holds two gallons of oil — sufficient for 24 hours' steady use at full flame. A *double* heat shield, attached to the wall of the heater, prevents any heating of this oil tank.

The pipe-line is placed *outside* the heater — a protective measure in keeping the oil cool.

Each leg of the heater is equipped with a special Florence leveling screw and there is a small spirit level on the heater.

The Heat Focusing Hood is a valuable accessory to the New H2 Heater when used as a Garage Heater. This hood, which is sold separately, attaches to the front of the heater just above the hot air outlet and conducts the heat directly to the radiator of the car.

A WIDE FIELD — MANY USES

The New H2 Heater is a general heater — a universal heater. Its powerful heat, safety features and attractive appearance make it suitable for any spot — garage, home, shop, office, store, warehouse, storeroom, brooder house and other farm buildings.

It is a portable heater. No installation expenses — simply place it where you want it and start it to work.
